Facebook Like Predictor

By Raghav Singh Chauhan 2014082

Algorithm:

1.Get the Details of Every Friend That likes a Previous Post

2.Count Previous Posts of some Time Interval(say 2 Days)

3.For Every Previous Post find the like of Every friend that liked my previous post.

4.for every friend:

Probability of him liking my future post=no of previous posts like by this friend/Total no of previous posts

5.Take a Probability Threshold(say 0.7)

6.For every friend:

If Probability is greater than 0.7 then likes=likes+1

Return likes

7.No of likes predicted on future post = likes
